

Decision Notice for LU 17-273482 AD Page 4 Staff finds criterion C.1.a is met. b. The sign will not create a traffic or safety hazard; and Findings: The signs are not located in a street right-of-way or area that could block visual clearance for vehicles and create a hazard. The signs will be affixed to a building and will be attached with multiple bolts that meet building code to reduce any risk of falling onto pedestrians. The signs do not contain any directional instructions and will not be mistaken for traffic signs. For these reasons, staff finds that the signs pose no traffic or safety hazards and that criterion C.1.b is met. c. The adjustment will allow a unique sign of exceptional design or style that will enhance the area or that will be a visible landmark; or d. The adjustment will allow a sign that is more consistent with the architecture and development of the site. Findings: The applicant can choose to meet c or d above. The applicant chose to address d. The proposed signs will be on buildings included in the newly designated food and retail services location on a 3.4-acre site near the airport. Two other retail buildings are proposed for the site and one, the 7-11 gas station and store, has already received approval for fascia signs similar in size and materials as the proposed signs. Without an Adjustment allowing these additional signs, some views of the new store would not have identifying signage that is expected for this type of development and helps with customers navigating the area. No vantage point will have views of all of the signs simultaneously, and as discussed previously, none of the proposed signs will appear unusually large or out of proportion with the structures on this site. The fascia signs will be the first signs attached to the new building housing the Dutch Bros. tenant space. Since the tenant space is located in the middle of the multi-tenant site and the purpose of the signs are to increase the visibility of the location for Dutch Bros. from streets and parking areas in multiple directions, the addition of the signs will enhance the functionality of the site and will remain consistent architecturally with the signs of other tenants. Staff finds criterion C.1.d is met. DEVELOPMENT STANDARDS Unless specifically required in the approval criteria listed above, this proposal does not have to meet the development standards in order to be approved during this review process. The plans submitted for a building or sign permit must demonstrate that all development standards of Title 32 and Title 33 can be met, or have received an Adjustment or Modification via a land use review prior to the approval of a building or sign permit. CONCLUSIONS The proposed signs will not cause street level sign clutter, will not adversely dominate the visual image of the area, and will not cause traffic or safety impacts. Approval of the Adjustment will allow signage that is consistent with the development and use on the site. Because the applicant has demonstrated that the approval criteria have been met, the Adjustment must be approved.
