

Decision Notice for LU 11-156697 HDZ Page 5 features that characterize the building. The proposed signs are of new materials and technology, clearly distinctive from the building's historic era. This guideline is therefore met.

8. Architectural compatibility. New additions, exterior alterations, or related new construction will be compatible with the resource's massing, size, scale, and architectural features. When retrofitting buildings or sites to improve accessibility for persons with disabilities, design solutions will not compromise the architectural integrity of the historic resource. Findings: The proposed signs are limited features to the building face. In massing, size, scale and design, they support and respect the historic definition of the building. This guideline is therefore met.

9. Preserve the form and integrity of historic resources. New additions and adjacent or related new construction will be undertaken in such a manner that if removed in the future, the essential form and integrity of the historic resource and its environment would be unimpaired; and Findings: The proposed work involves only minimal construction and no changes in form, or fundamental design. The sign will be attached through the reinforced concrete skin which as part of this rehabilitation has been patched and repainted. In the event that the signs are removed, the points of attachment to the building can be similarly patched and repainted so that the historic design appeared unimpaired. This guideline is therefore met.

10. Hierarchy of compatibility. Exterior alterations and additions will be designed to be compatible primarily with the original resource, secondarily with adjacent properties, and finally, if located within a Historic or Conservation District, with the rest of the district. When practical, compatibility will be pursued on all three levels. Findings: The proposed signs are compatibly sized and located so as to support the historic design as well as the overall ambiance of the surrounding properties. This guideline is therefore met.

River District Design Guidelines and Central City Fundamental Design Guidelines The River District is planned to become a place that is remarkable within the region. The area is intended to grow rich with special and diverse qualities that are, or will become characteristic of Portland. Further, the River District will accommodate a significant portion of the region's population growth. The plan calls for the creation of a new community of dense neighborhoods, housing a resident population of over 15,000 people, and providing jobs, services, and recreation to this population and others. This area is intended to emphasize the joy of the river, connections to it, and create a sense of community. The goals frame the urban design direction for Central City and River District development. The Central City Fundamental Design Guidelines and the River District Design Guidelines focus on four general categories. (A) Portland Personality, addresses design issues and elements that reinforce and enhance Portland's character. (B) Pedestrian Emphasis, addresses design issues and elements that contribute to a successful pedestrian environment. (C) Project Design, addresses specific building characteristics and their relationships to the public environment. (D) Special Areas, provides design guidelines for the four special areas of the Central City.

River District Design Goals

1. Extend the river into the community to develop a functional and symbolic relationship with the Willamette River.
2. Create a community of distinct neighborhoods that accommodates a significant part of the region's residential growth.
3. Enhance the District's character and livability by fostering attractive design and activities that give comfort, convenience, safety and pleasure to all its residents and visitors.
4. Strengthen connections within River District, and to adjacent areas.
